

Please take the time to carefully read and follow the Quick Start Guide, Important Safety Instructions, Warranty and Contact Information.

#### Positioning the speakers

For proper performance, place the right speaker to the right and the left speaker to the left of your computer. Make sure there is equal distance on either side.

#### Getting Started

Do not plug in the AC power cord until all other connections are completed.

① Speaker cable (G): Insert the free end into the **To Left Speaker** connector on the right speaker.

② Audio input cable (A): Insert one end into the **Audio Input** connector on the right speaker. Insert the other end into the Headphone or Speaker connector (the labels and positions of these connectors vary) on your computer.

Note: To use these speakers with a different sound source (such as an MP3 or portable CD player), make this connection to the **Audio Out** connector on that source instead.

③ Power pack cable (---): Insert the free end into the **Power** connector on the back of the right speaker.

④ Attach the adapter before plugging in the power pack.

⑤ Plug the power pack into an AC (mains) outlet.

Note: Bose recommends using a safety agency-approved surge protector with all electronics equipment.

⑥ Insert the provided demonstration disc into your computer disc drive and set it to play.

⑦ A. Press the power button on the side of the right speaker. Or press the power button on the remote control while aiming it at the right speaker.

B. The indicator light on the front of the right speaker turns on.

C. Press the + and - buttons on the side of the right speaker or on the remote control.

#### Set volume controls on computer

Low volume settings (less than  $\frac{1}{2}$  maximum) on your computer reduce its output and unnaturally reduce speaker volume.

Computer volume controls often include:

- External buttons, which may operate independent of the onscreen controls.

- Various media player controls:

#### Replacing remote control battery

See back of remote.

Replace only with an agency approved (ex. UL) CR2032 or DL2032 3-volt lithium battery.

#### Automatic standby (Europe only)

The system automatically goes into the standby state after two hours when there is no audio signal. For recovery from automatic standby, press power on right speaker or on the remote.

#### Troubleshooting

##### No sound

- Make sure the speakers are turned on as indicated by the light on the front of the right speaker.

- Make sure the speaker volume is not set to the minimum. Press the + button on the right speaker for 2 seconds to raise the volume enough.

- Make sure the computer is plugged in and turned on, mute is turned off, and the computer volume and application volume are turned up to at least  $\frac{1}{2}$  maximum.

- Be sure the power pack is securely plugged into the right speaker and into a power outlet or surge protector.

##### No sound from one speaker

- Be sure the speaker cable is securely plugged into the right speaker.

- Be sure that both ends of the audio input cable, one to the speaker and the other to the computer, are plugged in securely.

##### Remote does not control the speakers

Some conditions, such as room lighting, furniture that blocks the signal path, or direct sunlight, can affect remote operation. If the remote does not work as it should:

- Point the remote more directly at the right speaker, which receives the remote control signals.

- Dim the room lights or move the speakers away from direct sunlight.

- Move closer to the system when you use the remote.

- Check the battery to be sure it is installed correctly.

- Replace the remote control battery when the remote stops operating (normally every year or two) or its range seems reduced.

#### Register your product

Go to <http://global.Bose.com/register>.

The serial number is located on the bottom of the right speaker and on the Customer Warranty card.

Serial number: \_\_\_\_\_

Model name: \_\_\_\_\_  
(Located on bottom label of speakers.)
